

Markdown to PDF with Glow Styling

This is a **sample markdown document** to demonstrate the conversion to PDF using Glow's beautiful styling.

Features

The `md2pdf` script supports:

- **Dark theme** (default)
- **Light theme**
- Automatic output filename generation
- Beautiful syntax highlighting

Code Example

Here's some Python code:

```
def hello_world():  
    """Print a greeting message."""  
    message = "Hello, World!"  
    print(message)  
    return True  
  
if __name__ == "__main__":  
    hello_world()
```

Lists

Unordered List

- First item
- Second item
- Third item with **bold** text

Ordered List

- 1.Install dependencies
- 2.Run the script
- 3.Enjoy your PDF

Task List

Create CSS files

Write conversion script

Test with various markdown files

Links and Images

Check out [Glow on GitHub](#) for more information.

Blockquotes

This is a blockquote with some *emphasized* text. It can span multiple lines and looks great in both themes.

Tables

Command	Description	Theme
<code>md2pdf file.md</code>	Convert with dark theme	Dark
<code>md2pdf file.md - light</code>	Convert with light theme	Light
<code>md2pdf --help</code>	Show help message	N/A

Horizontal Rule

Text Formatting

You can use *italic*, **bold**, ***bold italic***, ~~strikethrough~~, and `inline code`.

Enjoy your beautifully formatted PDFs! 🎉
